Course & Section Nos.	EDSS 545 A Section 1
Course Title	Secondary Science Methods
Class Roster No.	
Course Day(s)	Thursdays and some Saturdays
Time	5:00-8:00 (Typically)
Course Location	UH 439
Semester / Year	Fall 2018
Instructor	Dr. Joe Keating
Phone	7605189613
E-Mail	jkeating@csusm.edu
Office	UH 439
Office Hours	By Arrangement

Forward:

This Science Method course is designed differently than most credential/graduate level courses. The purpose is to give you the experiences of a variety and range of potential learning environments many of which are transferrable and used successfully in secondary classrooms. With that in mind, be flexible and open to a variety of structures within the course. These structures/learning environments include within this two semester course: online teaching/flipped classroom, video conferencing (whole class and small group), full day workshops, integrated/split classes (math and science), independent study, field trips as well as the more traditional meetings. It is important (like it is for your own students) that you are always accountable and evaluated in each environment (so you know what you have and have not learned about the pedagogy of science teaching). I will always expect quality efforts for your learning and the products you produce. My expectation is for you to exit the credential program and this course with the skills, interests and abilities of the very best science teachers, which includes passing the TPA exams and obtaining a full time teaching position.

SCHOOL OF EDUCATION MISSION & VISION STATEMENT
(Adopted by SOE Governance Community, January 2013)

Vision

To serve the educational needs of local, regional, and global communities, the School of Education advances innovative practice and leadership by generating, embracing, and promoting equitable and creative solutions.

Mission

The mission of the School of Education community is to collaboratively transform education. We:

- Create community through partnerships
- Promote and foster social justice and educational equity
- Advance innovative, student-centered practices
- Inspire reflective teaching and learning
- Conduct purposeful research
- Serve the School, College, University, and Community

BASIC TENETS OF OUR CONCEPTUAL FRAMEWORK

- Student centered education
- Research and theory specific to the program field inform practice
- Connections and links between coursework and application
- Strong engagement between faculty and candidates
- Co-teaching clinical practice
- Culturally responsive pedagogy and socially just outcomes

SCHOOL OF EDUCATION MISSION & VISION STATEMENT

(Adopted by SOE Governance Community, January 2013)

Vision

To serve the educational needs of local, regional, and global communities, the School of Education advances innovative practice and leadership by generating, embracing, and promoting equitable and creative solutions.

Mission

The mission of the School of Education community is to collaboratively transform education. We:

- Create community through partnerships
- Promote and foster social justice and educational equity
- Advance innovative, student-centered practices
- Inspire reflective teaching and learning
- Conduct purposeful research
- Serve the School, College, University, and Community

COURSE DESCRIPTION

This course will be held both fall and spring semesters for a total of 4 credits (approximately 30 contact hours per semester, 2 credits per semester). It fulfills the requirement for a methods course for all Single Subject (Secondary) Science credential students. Upon completion of this course, the preservice teacher will be able to formulate a basis to teach standards based science course in the secondary school in a manner that is exciting, creative and rigorous. To accomplish this, the candidate will formulate a personal framework of science education based on both a historical/philosophical perspective as well as from knowledge of the state and national frameworks and other reform documents. Using this knowledge as a framework, he (she) will learn to apply multiple strategies and resources for the development of unit plans, instructional delivery and assessments that utilize a student-centered, inquiry (problem-solving) and community based approach to the teaching of science for all students. This should be in evidence during Clinical Practice 1 and 2 as part of the required Teacher Performance Assessments (TPA).

Classes will consist of formal class meetings, field trips, video conferences and independent study totaling approximately 20 seminars @ 10 seminars per semester @ 3.0 hrs.each

Course Prerequisites

Admission to the Single Subject Program or pursuit of a single subject Science add-on credential (by permission) is required to enroll in this course as well as EDUC 350, EDUC 364, & EDUC 422 or equivalent.

Course Objectives

1) The teacher candidate will be able to apply **the major concepts of frameworks and standards in Science**

Education to their curriculum based on the California Frameworks in Science, the Next Generation Science Standards (NGSS) as well as the general recommendations for science education indicated by international studies such as Tests of International Science and Math Study (TIMSS) within all the assignments and in particular for **successful completion of the Ca-TPA exams.**

- 2) The teacher candidate will be able to understand what is learned from the **general history, ethics and philosophy of science education** in the United States and how it might apply to current educational practice;
- 3) The teacher candidate will understand and be able to **integrate a variety of diverse resources** appropriate for science education including texts, lab manuals, equipment, technologies and both informal and formal community related resources;
- 4) The teacher candidate will be able to apply to the curriculum and their students the **major concepts of safe and effective science teaching and learning** to laboratory and general classroom practices;
- 5) The teacher candidate will be able to effectively **implement the major teacher strategies considered best practices in Science education** such as interactive expository teaching; inquiry-based learning; open-ended laboratory experiences; integrating technology; teaching from argumentation and the integration of community/ field resources (internships, service-learning and school to career);
- 6) The teacher candidate will be able to appropriately integrate a range of strategies for the integration of a variety of **diverse assessments** including both formative/summative that can be authentic or traditional;
- 7) The teacher candidate will be able to apply the protocols and learning strategies required in **science inquiry-based enrichment activities** such as Science Olympiad, Odyssey of the Mind, Invention Convention, FIRST and Science Fair that extend beyond the standard curriculum;
- 8) The teacher candidate will be able to demonstrate their ability to **integrate the sciences as well as other disciplines** into the standard science curriculum (interdisciplinary curriculum) as a major tenet of NGSS;
- 9) The teacher candidate will be able to **include all students in the curriculum** by applying the major curricular and pedagogical strategies for teaching multicultural, multilingual students (SDAIE/ELL);
- 10) The teacher candidate will be able to identify issues involved in the teaching and learning of science and apply **teacher-led research designs (action research)** for the ongoing purpose of improving practice.

REQUIRED TEXTS, MATERIALS AND/OR ACCOUNTS

Science Instruction in the Middle and High School (Chiappetta and Koballa) (2014 8th Edition) + Video Analysis of Classroom Teaching (see CSUSM bookstore).

Use of Discrepant Events for K-12 Science Teachers (Aztec Press /University Bookstore), (Keating Customized text)

Flinn Scientific <http://www.flinnsci.com/teacher-resources/safety/general-laboratory-safety.aspx>

Next Generation Science Standards (NGSS): Overview and Conceptual Shifts and Complete Standards

<http://www.nextgenscience.org/next-generation-science-standards>

<http://www.nextgenscience.org/sites/ngss/files/NGSS%20DCI%20Combined%2011.6.13.pdf>

CA/NGSS Clarifications/Examples/Standards

<http://www.cde.ca.gov/pd/ca/sc/ngssstandards.asp>

Online resource: EDMODO (details to be discussed in class)

COURSE LEARNING OUTCOMES

These objectives will be measured (by utilizing rubrics) through the successful application of the concepts during the completion of specific assignments (see descriptions). Prior to completing the assignments, students will be presented with opportunities to discuss effective models and examples, using texts and other readings and through discussions both in-class and EDMODO (blog). The expectation is that they will successfully and seamlessly be able to integrate these applications in clinical practice 1 and 2 (as measured by supervisor's observation as indicated in the teacher performance applications (TPA). These are the Course Learning Outcomes (CLO's)

Authorization to Teach English Learners

This credential program has been specifically designed to prepare teachers for the diversity of languages often encountered in California public school classrooms. The authorization to teach English learners is met through the infusion of content and experiences within the credential program, as well as additional coursework. Candidates successfully completing this program receive a credential with authorization to teach English learners. (*Approved by CCTC in SB 2042 Program Standards, August 02*)

Teacher Performance Expectation (TPE) Competencies

The course objectives, assignments, and assessments have been aligned with the CTC standards for the Single Subject Credential. This course is designed to help teachers seeking a California teaching credential to develop the skills, knowledge, and attitudes necessary to assist schools and district in implementing effective programs for all students. The successful candidate will be able to merge theory and practice in order to realize a comprehensive and extensive educational program for all students. You will be required to formally address the following TPEs in this course:

Teacher Performance Assessment

Beginning July 1, 2008 all California credential candidates must successfully complete a state-approved Teacher Performance Assessment (TPA), as part of the credential program of preparation. During the 2015-16 academic year the CSUSM credential programs will use either the edTPA (Educative Teacher Performance Assessment).

Ca-TPA

Beginning in fall 2018, for newly entering initial candidates, the CSUSM assessment system is the Ca-TPA. To assist with your successful completion of the Ca-TPA, a capstone class is part of your curriculum. In this class Ca-TPA related questions and logistical concerns are addressed each semester for the two components of the exams. Additional support materials are available on the Ca-TPA website:

http://www.edtpa.com/PageView.aspx?f=GEN_Candidates.html

Additionally, to support your success in your credential program and with TPA, SOE classes use common pedagogical language, lesson plans (lesson designs), and unit plans (unit designs).

Expected Dispositions for the Education Profession

Education is a profession that has, at its core, certain dispositional attributes that must be acquired and developed. Teaching and working with learners of all ages requires not only specific content knowledge and pedagogical skills, but also positive attitudes about multiple dimensions of the profession. The School of Education has identified six dispositions that must be evident in teacher candidates: social justice and equity, collaboration, critical thinking, professional ethics, reflective teaching and learning, and life-long learning. These dispositions have observable actions that will be assessed throughout the preparation program. For each dispositional element, there are three levels of performance - *unacceptable*, *initial target*, and *advanced target*. The description and rubric for the three levels of performance offer measurable behaviors and examples.

The assessment is designed to provide candidates with ongoing feedback for their growth in professional dispositions and includes a self-assessment by the candidate. The dispositions and rubric are presented, explained and assessed in one or more designated courses in each program as well as in clinical practice. Based upon assessment feedback candidates will compose a reflection that becomes part of the candidate's Teaching Performance Expectation portfolio. Candidates are expected to meet the level of *initial target* during the program.

CLASS SCHEDULE/COURSE OUTLINE

Date	Topic	Assignment (if any)	Due Date
Session 1AB 9/6-13/18	Introduction to Science Teaching	Textbook and NGSS Standards Online Responses	September 6/13 respectively
Session 2 9/20/18	"	"	September 20
Session 3 9/27/18	Frameworks Jigsaw	DE and Frameworks Assignments	September 27
Session 4 9/29/18	Inquiry Based Teaching	DE and Inquiry Assignments	September 29
Session 5 9/29/18	Observation of Science Teaching	Case Study Problem Identification/Obs. Report	September 29
Session 6 10/11/17	Case Study Baseline Data	DE Presentations/Baseline Data	October 11
Session 7	Independent Study on Science Teaching	Final Report of independent study	Self Determined
Session 8 10/25/18	Inquiry Based Teaching	DE Presentations/Reading Reflections	October 25
Session 9 11/29/18	Safety in the Science Classroom	Science Safety Plan presentation	November 29
Session 10 12/17/18	Data analysis and Report on Case Study	Presentation of Case Study Report	December 17 Note: Monday

COURSE REQUIREMENTS AND GRADED COURSE COMPONENTS

Course Assignments

The Assignments and point value for both semesters are listed in numerical order and described in more detail in the following section "Description of all assignments".

The final grade for EDSS 545 A/B will be the % of total points earned that semester converted to a letter grade (93-100=A; 90-92=A-; 83-89=B; 80-82=B- etc.) **Assignments are due on time and will not be accepted late unless there are extenuating circumstances. Assignments that are used in the Spring only * are indicated with an asterisk; ** are Fall only and *** are for both semesters.**

- ***1) Attendance/participation **both semesters** (5 pt. per class) (50 pts.)
- ***2) A) Sci. Methods Text Readings/Prompts (6pts)/Responses (3 pts)/Video responses (9pt)
- * 2) B) Scope and Sequence for CP 1 Overview (10 pts)
- * 3) A/B/C Jigsaw of Next Generation Science Standards (NGSS) (30 pts)
- ** 4) Evaluation of best practices for education technology tools (I-Pads/I-Phones) and software (10 pts)
- ** 5) Evaluation of Science Internet sites (10 pts)
- * 6) A/ B Inquiry---Discrepant event reflection (5pts.)/ Presentation(s) (25pts) (30 pts)
- ** 7) Applying Action Research by comparing SDAIE to Traditional Labs (35pts)
- * 8) Development of an outline for a Personal Plan for Science Safety (10 pts)
- * 9) Observation of science lesson(s) (15 pts.)
- ** 10) Enrichment and extracurriculum science programs (40 pts)
- ** 11) Book Report on high interest science book (10 pts.)
- ***12) Open ended/independent science study **both semesters** (10 pts)
- ** 13) Strategies for implementing field trips at the high school level (Safari Park/CRB) = (20 pts)
- ** 14) Researching and presenting a mini-lecture on a current topic in science (25pts)
- ***15) Case Studies/Action Research (**both semesters**): Issues in student teaching Clinical Practice =(5+5+5 +20 pts)=35pts.)
- * 16) Implementing Open-ended (Inductive) vs. Closed Ended (Deductive) Labs/ Experiments (10 pts.)

Optional/Extra credit: (maximum 10 pts per semester)

- 1) Directorship (5 pts.)
- 2) SDSEA or CSTA or NSTA or other Conference in addition to open assignments (5 pts. one day)
- 3) Teaching the DE during CP 1 or Mini-Lecture during CP 2 (5 pts.)
- 4) Other (determined by arrangement with instructor)

Point's summary:

Fall Semester:

Assignments #1 (50 pts); #2 A (54 pts): #2 B (10 Pts); #3 (30 pts); #6 (30 pts); #8 (10 pts) #9 (15pts); #12 (10 pts); #15 (35 pts); #16 (10 pts.)= 254 pts.

Grading Standards

School of Education/Course Attendance Policy

Due to the dynamic and interactive nature of courses in the School of Education, all candidates (course participants) are expected to attend all classes and participate actively. At a minimum, candidates (course participants) must attend more than 80% of class time, or s/he may not receive a passing grade for the course at the discretion of the instructor. Individual instructors may adopt more stringent attendance requirements. Should the candidate (course participants) have extenuating circumstances, s/he should contact the instructor as soon as possible. (*Adopted by the COE Governance Community, December, 1997.*)

Note: Both attendance and punctuality are essential to completing all work satisfactorily. Point values are assigned for each class (5 pts per class or 10 pts for field trips). In addition, only 50% of the potential value for an assignment can be credited as makeup for an assignment that is due and reviewed in a class that was not attended by the student. Two absences in one semester can result in a minimum of one grade lower; three absences can result in a non-passing grade (unless there are extenuating circumstances). Late arrivals will be penalized at the discretion of the instructor.

GENERAL CONSIDERATIONS

CSUSM Academic Honesty Policy

Students will be expected to adhere to standards of academic honesty and integrity, as outlined in the Student Academic Honesty Policy. All assignments must be original work, clear and error-free. All ideas/material that are borrowed from other sources must have appropriate references to the original sources. Any quoted material should give credit to the source and be punctuated accordingly.

Academic Honesty and Integrity: Students are responsible for honest completion and representation of their work. Your course catalog details the ethical standards and penalties for infractions. There will be zero tolerance for infractions. If you believe there has been an infraction by someone in the class, please bring it to the instructor's attention. The instructor reserves the right to discipline any student for academic dishonesty, in accordance with the general rules and regulations of the university. Disciplinary action may include the lowering of grades and/or the assignment of a failing grade for an exam, assignment, or the class as a whole.

Incidents of Academic Dishonesty will be reported to the Dean of Students. Sanctions at the University level may include suspension or expulsion from the University.

Refer to the full Academic Honesty Policy at:

http://www.csusm.edu/policies/active/documents/Academic_Honesty_Policy.html

Plagiarism

As an educator, it is expected that each candidate (course participant) will do his/her own work, and contribute equally to group projects and processes. Plagiarism or cheating is unacceptable under any circumstances. If you are in doubt about whether your work is paraphrased or plagiarized see the Plagiarism Prevention for Students website <http://library.csusm.edu/plagiarism/index.html>. If there are questions about academic honesty, please consult the University catalog.

Students with Disabilities Requiring Reasonable Accommodations

Students with disabilities who require reasonable accommodations must seek approval for services by providing appropriate and recent documentation to the Office of Disability Support Services (DSS). This office is in Craven Hall 4300, contact by phone at (760) 750-4905, or TTY (760) 750-4909. Students authorized by DSS to receive reasonable accommodations should meet with their instructor during office hours. Alternatively, in order to ensure confidentiality, in a more private setting.

Credit Hour Policy Statement

Per the University Credit Hour Policy: Courses with face-to-face instruction:

Since this course is considered a "lecture mode" of instruction per university policy, expectations are that students will spend a total of approximately 30 hours of class time per semester (2 credit class X 15 hours per credit= 30hrs). In addition, students are expected to spend about 4 hours per class meeting (2 hours per credit hour X 2 credits) in preparation, assignments and readings.

All University Writing Requirement

The writing requirements for this class will be met as described in the assignments. Every course at the university, including this one must have a writing requirement of at least 2500 words

Electronic Communication Protocol

Electronic correspondence is a part of your professional interactions. If you need to contact the instructor, e-mail is often the easiest way to do so. It is my intention to respond to all received e-mails in a timely manner. Please be reminded that e-mail and on-line discussions are a very specific form of communication, with their own nuances and etiquette. For instance, electronic messages sent in all upper case (or lower case) letters, major typos, or slang, often communicate more than the sender originally intended. With that said, please be mindful of all e-mail and on-line discussion messages you send to your colleagues, to faculty members in the School of Education, or to persons within the greater educational community. All electronic messages should be crafted with professionalism and care.

Things to consider:

- Would I say in person what this electronic message specifically says?
- How could this message be misconstrued?
- Does this message represent my highest self?
- Am I sending this electronic message to avoid a face-to-face conversation?

In addition, if there is ever a concern with an electronic message sent to you, please talk with the author in person in order to correct any confusion.

Grading Standards /Overview of Assignments

Description of all Assignments (by number): both semesters included

Assignment # 1 Attendance and Participation (each class counts 5 points) In the event of **an absence any assignments due that night could receive only 50 % of the potential credit** (if made up) since you were not there to interact and discuss the assignment with your colleagues. This includes the independent Study Class #7 and the Online Class#1 A and #1 B.

Assignment #2 A Science readings in text (9 points each chapter) Each chapter is assigned a value of nine points that includes your response to a series of prompts and and in-class discussion (See specific text chapter) (6 pts.) as well as your response to others on EDMODO (3 pts). **You are expected to respond to at least two students and myself on EDMODO for each assigned reading.**

Assignment #2 B Scope and Sequence of CP 1 Class (10 pts.)

Create a Scope and Sequence of your CP 1 course. **See template attached as Addendum C** . This will include: 1) District Curriculum Course Map for the Semester; 2) School site/Department Unit Plan (just one) and 3) Specific day by day outline of CT's lessons for this unit (approximately 5 days of the unit).

Assignment #3 A/B/C – Understanding and applying the Next Generation Science Standards (NGSS) (30 pts)

Spirit of the assignment:

This assignment overviews what (content) should be taught and what (process/strategies) research suggests is most effective in teaching science to all students. This overview will lead to you and your team to apply your understanding of these standards and strategies by integrating them in an inquiry-based lesson. These same skills will be elaborated on throughout the course and during CP 1 and 2 and will be applied numerous times in other assignments. It is also essential to your training as a science teacher to understand the general principles of this new paradigm as you seek potential employment.

More specifically your colleagues, as members of different science subject matter teams, will assist in over-viewing the entire NGSS (by using the jigsaw method). This beginning learning process consists of three components 3a, 3b and 3c (see specifics below).

In 3a, you will individually read and respond to NGSS documents as well as view NGSS video's independently from the various areas of the NGSS (see two links under required texts (Flip Classroom model).

In 3b, you will individually use the information and examples from these documents to create an outline of a lesson plan (see specifics below).

3C will be completed in class with your subject matter team and consists of discussing the important ideas from the NGSS readings and sharing your lesson plan with your subject matter team (Jigsaw 1). Each subject matter team will choose or consolidate one representative lesson to elaborate and enhance and use this to demonstrate their understanding of a specific standard for their content area (Physics, Chemistry, Earth or Life Science) for the entire class (Jigsaw 2). During the subject matter team presentation to the whole class (8 minutes) the following should be accomplished: 1) Present an overview of your inquiry based mini- lesson; 2) Present a short overview of all the major standards expected to be addressed in your subject area; 3) Give a rationale for which standards might be de-emphasized or eliminated if time is a factor; 4) Address questions from other subject level teams. Team in class.

It's essential to your beginning understanding of NGSS that you do the reading, responses and individual lesson plan BEFORE you meet with your subject matter team in class. These activities are part of the credit for Class #1

NGSS Standards/Framework specific tasks

3A Individual Work (prior to class) (10 points) Use this link to assist as an overview

<http://www.nextgenscience.org/next-generation-science-standards>

Read and outline the following Framework sections and suggest questions for discussion in class from the NGSS that are representative of a beginning understanding: 1) NGSS Front Matter (Executive Summary); 2)

NGSS Structure (How to Read it); 3) Conceptual Shifts A (How is it different); 4) View the Video: "Why NGSS—The Need" and the PDF (Type in to search) "NGSS Introduction and Overview"; 5) **Briefly (only) overview the introductions for the following sections:** Sections D-J. 6) Note any questions you have for our discussions

Read and summarize all the NGSS standards for only your major subject matter area (Grades 9-12 Physical/Chemical, Life or Earth and Space Sciences) Use the CA/NGSS link=

<http://www.cde.ca.gov/pd/ca/sc/ngssstandards.asp> since this provides some examples and clarifications that might be useful. From these standards select **at least one standard** to create a one day lesson plan outline as described in 3B below.

3B Individual work (prior to class) Science subject standards response (only your subject area) (10 points)

Using the standard (DCI) (s) you chose for your subject area in 3a 1) Write the standard(s) and the context of the lesson; 2) come up with a brief description of an **inquiry based lesson activity** that students in that subject area can do to assist in understanding the standard and; 3) explain in what ways you would assess their knowledge and 4) how could this lesson incorporate the other ideas discussed from the NGSS concepts (cross discipline ideas; engineering/modeling concepts; applying technology and including math and language arts) as well as any other ideas suggested in the NGSS. Here is a link that you can use as a resources that describe unit plans with a number of lessons linked to the ideas of the NGSS standards. This is part of MA Thesis project from one of our (former grad April Thom's 8 week unit on Ecology field tested in Escondido <http://csusm-dspace.calstate.edu/handle/10211.3/202484>

3C. Team preparation and presentation (In Class) (10 points)

Get together with your team by subject areas (chemistry/ physics, biology, earth science). Look at the activities that everyone wrote up for Assignment 3b. Choose one that your team feels is the best representation of the application of the standards/frameworks or integrate two that may work together. Elaborate and enrich the original based on input from all members.

As a team, write up a final lesson plan for the activity stating the standard(s) (with activities, assessment,). This lesson plan should integrate the ideas from the NGSS Standards as well as discussed in 3b above. Compose a **visual representation** of it. As a team, think about the entire set of standards for the subject area. ? Make a list to present to the class, and be prepared to give your reasons for your choices.

Summary: In 8 minutes or less, 1) present a visual representation of your inquiry based lesson plan to demonstrate how a standard(s) and the major themes of the NGSS/ frameworks might be integrated into this lesson; 2) present an overview of the major standards expected to be addressed in your subject area; 3) which ones would your team de-emphasized or eliminate if time is a factor; 4) address any questions from classmates.

Assignments #4 and #5 (Evaluation and Use of Technology Resources) Spring Semester Only

Assignment 4 Internet Sites (10 pts);

Assignment 5 Technology tool/software as utilized by the I-Pad (10 pts)

Spirit of the Assignment: Individually explore Internet resources (web pages, simulation games etc. and technology tools and apps (such as the I-Pad).

For assignment #4 explore in detail at least one Internet site that is a valuable for teachers or students for information, simulation etc. List the URL and access it on Smart classroom projector and navigate the site and explain how you would use it in your classroom.

For assignment #5 explain or demonstrate a tool or strategy for using the I-Pad Demonstrate it in front of class and how you would apply it to the Science classroom.

Assignment # 6: Inquiry based Discrepant Event Presentation (30 pts)

Spirit of the Assignment: To develop and teach a particular kind of a science inquiry lesson that teaches both Science thought processes and science content (applies the NGSS standards). You will practice your discrepant event **prior to presentation in class** with a middle or high school age student(s) and reflect on the student's responses and their understanding/misunderstanding and make appropriate modifications. You will then present your modified discrepant event to the class and give a copy of the lesson plan to each class member (see model

lesson from “Bouncing Balls” DE Presentation or Discrepant Event Textbook). **Teaching and reflecting on the DE with your class from CP 1 will be rewarded with extra credit (Lesson Study Model)**

6a. **Discrepant Event Lesson Plan and Presentation** 25 points

- Select a discrepant event lesson that connects to the subject matter of your CP1 experience. As a model for your lesson plan you can get one from Discrepant Events, by Keating, or go to another available resource. Be sure to include an appropriate NGSS (as well as some of the elements suggested by these) or CA standard (s).
- Get together the materials needed for the discrepant event.
- Practice doing the event on your own and then with some student aged individuals (see 6 B).
- Make sure you understand the science behind the event.
- Do your discrepant event with at least one middle or high school age student prior to doing it in class and take careful notes on the student’s responses. (This ties in with Assignment 6b reflections.)
- Present your DE to the class as if they were your students. At some point, make sure you explain the context of the lesson and what would you do before and or after it (You may discuss your findings from the pre-event DE with your classmates as part of this presentation.
- You are limited to 15 minutes of actual presentation time.
- After presenting your event, give a copy of the DE lesson plan to each member of the class and your reflective individual journal to the instructor (see 6B)
- Using what you learned by doing it at least twice (Lesson Study Model) apply this DE to one of your courses in CP 2 (optional but extra credit (5 pts.) for doing it and reporting on how it went)

6b. **Discrepant event journal (Reflection on Pre-Event)** 5 points

- Prior to presenting your DE in class, practice it as a pre-event discrepant event with a student, look at your notes and think about how it went. (You may realize that your event needs to be modified before you do it with the class.)
- **Hand in a written description** of what happened, with special attention to what the student said and did. Analyze the student’s response: what portions of the event did the student understand (not understand) what was happening? Did they understand the underlying science concept? What modifications to what you say or do might be necessary for better understanding? **Share these ideas after you do the DE in class.**

Assignment 7: Applying Action Research to a Science Lab (SDAIE) modification (35 pts) Spring Semester (See Addendum B for Final Report Template) Spring Semester Only

Spirit of the Assignment: Use an existing science lab or activity that you will use in CP 2 and rewrite it to be more appropriate for second language learners (use SDAIE/ELL techniques as discussed in this course (Ch. 12) as well as others you have had). You will use the action research model to evaluate its effectiveness by comparing outcomes of experimental lab (SDAIE) with a control (original lab or activity) using classes you teach in CP 2.

Specifics of the assignment: The assignment consists of four parts.

- Discuss readings and other resources related/connected to ELD Standards and related strategies as a basis for modification of existing laboratory activities.
- Display a copy of the original science lab or activity and revised SDAIE lab (5pts) explaining the adaptations you have made (5pts);
- Design an action research proposal using the action research design (see syllabus) and present this to the class for discussion (5pts).
- After you have completed the research present the findings (Final report= 20 pts) by comparing outcomes from the two lab classes one of which used the original lab (control) and another which used the modified SDAIE lab (experimental).

Assignment 8 Development of a personal Plan for Science Safety (10 pts)

Spirit of the Assignment: Use readings from the safety manuals from (Flinn Scientific and CA Safety Manual and, Science Safety Chapter in text etc.) and the interview with a science teacher (CT) **to propose a written outline of a Plan for Science Safety** that you will (can) use within your science discipline. More specifically this might include: from your CT information/resources, safety contracts, demonstrations, laboratory protocols, lesson plans that they use, as well as any general experiences in dealing with science safety. This will be sent to EDMODO and shared with others during a class discussion.

Assignment # 9 Observation of science lessons and teaching strategies (15 pts.)

Spirit of the assignment: To objectively and formally observe and critically analyze a science lesson. During your observation/participation time you will find a science teacher who may or may not be your own master teacher. For

#9 you will interview the teacher before and after the lesson. If possible, it's good to also talk with some of the students after the lesson (see some general guidelines and questions you may use for 9 below).

Some suggestions/ guidelines for completing 9 (15 pts):

GENERAL INFORMATION: grade level, subject area, description of the activity/standards as well as responses to some of the suggested prompts below should be sent to EDMODO and will be discussed in class.

BEFORE (Interview)

- How did the teacher come to do this lesson? (Is it linked to the NGSS or CA Standards?)
- How did he/she pick the topic?
- Where did the materials come from?
- In general, how does the teacher think the student's have/ will respond to the lesson?
- Identify some students in the class who will like this lesson and do well on it.
- Identify some students who might have difficulty, either cognitively or behaviorally and describe the problems they are likely to have and how the teacher might adapt in consideration of this.

DURING (Observation)

- Is there a written or unwritten plan for this lesson?
- Does it include some elements of inquiry (in the discourse, in the activity, in the assessments)? Does it contain /technology/engineering? Does he/she link the topic to other lessons/subjects?
- What are the objectives and or key questions (if this/these are unstated, you will have to figure them out)
- How does the teacher know that the objectives were met at the end of the lesson (formative or summative assessments)?
- How does the teacher know how the lesson is going as the lesson progresses/ whether the students are getting it? (Formative i.e. checking for understanding)
- Does the teacher make any adaptations to address the needs of the children who have difficulty (ELL/Special Needs)?
- Can you clearly follow the procedures the teacher is using as well as understand the science concept and do they relate directly to the objectives?
- What other non-instructional strategies supported or distracted from the teaching of this lesson?
- Were language arts skills (oral language, reading, writing) and or mathematical processes included in the lesson?

AFTER (your analysis, interview with teacher, and if possible, some students)

- How successful (unsuccessful) was the lesson? Explain?
- Did the teacher correctly predict the performance of specific students?
- Did the adaptations (if there were any) work?
- How about the class as a whole – were the students engaged?
- Did they learn the skills and or content? How did you know?
- Were there any logistical problems?
- If you taught this lesson, how would you change it? (Include as many things as you can think of. Even if the lesson was wonderful, come up with at least one modification of your own).

Assignment #10: Enrichment and Extracurriculum Science Programs (Spring Semester only (40 pts)

Spirit of the Assignment: Students will research, overview and discuss some of the major extracurricular activities used in Science such as Science Research Projects (Science Fair/ Pure Science), Odyssey of the Mind (Problem Solving), Science Olympiad and Invention Convention (Applied Science). Two of these models will be applied by simulating the actual process used by teachers. The process includes the following: 1) Students will be assigned teams and specific problems for Odyssey of the Mind (Long Term Problem, Spontaneous Problem and Style) and the Invention Convention. 2) Using the processes recommended and timelines (and examples reviewed) teams will follow the processes and enter their formative tasks on Google Docs (instructor will provide ongoing feedback and evaluation on Google Docs for each team; 3) Teams will present their final solution to each project and be evaluated by the rubric (see syllabus) and compared to the other teams.

Assignment #11 Book Report on high interest science book (10 pts.) Spring Semester only

Spirit of the assignment: read a new book in fiction or non-fiction that you would like to read for general interest, deep background or for inclusion in your own class. By reading yourself you increase the likelihood that

you will include science reading as part of the curriculum for your own students. Share this electronically with your classmates.

For this assignment read, summarize, rate (1-5 with justification) and make recommendations on how you might incorporate into your teaching either directly indirectly. Share this formal review electronically with instructor and classmates as well as during the general class discussion.

Assignment # 12 Independent Study: Attendance at a formal or informal science event, presentation or site (10 pts each semester 20 pts in all) Both semesters

Spirit of the assignment: By attending formal or informal outside events or sites **equivalent in time and effort for at least one class session (3 hrs)**. The purpose of completing this assignment is that a teacher has a model for and is more likely to create assignments that encourage their own students to seek out such events/sites and include them as part of their curriculum. **The independent study session could be a field trip, museum, lecture, conference or some other equivalent experience that will assist you either directly or indirectly in becoming a science teacher. Your choice!! To complete this requirement: 1) complete a one-page summary with explanation of its potential applications to teaching. Specifically this should include a summary of what you learned and implications for your own teaching; 2) send to EDMODO; 3) do a 1-2 minute presentation to the class.**

Assignment # 13 Attendance at a field trip to the Safari (Safari Park)/ Center for Reproductive Biology/Beckman Center (Spring 20 pts)

Spirit of the assignment: by attending this field trip students will: 1) general procedures for planning an implementing a field trip in science for all students including ELL; 2) how to access and use resources of the site in a variety of ways prior to the field trip; 3) Pre, during and post lesson plans that apply the science standards by using a) site prepared and modified curricular materials; b) original teacher developed and implemented curricular plans

Assignment # 14 Research a current issue or topic in science and present a mini-lecture that you can apply in your own class (es) (25 pts). Spring Semester only

Spirit of the assignment:

A) Research a current issue or topic that could be used in a class you are scheduled to teach in CP2. The instructor will model an inquiry-based mini-lecture or teaching science from argumentation that applies NGSS standards. A rubric will be developed through a class discussion based on information on effective lectures from Ch. 11 and used to evaluate each mini-lecture. During this 15- minute mini-lecture you model/integrate some of the effective pedagogical strategies discussed in class. The class audience and instructor will evaluate/provide feedback using the rubric for a Science Mini-Lesson. (20 pts)

B) Optional extra credit (5 pts.). **Based** on this discussion, use your modified mini-lecture in a revised version as part of one of your lessons in CP 2. This can assist you in the development of a videotape lesson as part of TPA 4.

Assignment #15 Issues in Science Teaching (Case Study/Action Research Approach-See Addendum C): both semesters (35 pts each semester)

Spirit of the assignment: Learn to apply a teacher-directed research model during CP 1 and 2 (Case Study/Action Research) in a collaborative setting that 1) addresses teaching issues/ problems (baseline data); 2) creates potential solutions (action plans) appropriate for the issue (related to content, curriculum, teaching strategy and (or) classroom management); 3) collects multiple sources of data to evaluate/analyze results; 4) report findings and suggestions/recommendations. Preliminary reports will track progress of study in collaboration with the class members. These include: #1 (Statement of issue(s) (5pts), #2 (Baseline data and action plans)(5pts.) and #3 (Preliminary Data) (5pts.). #4 Final written and oral Case Study report will be presented at the end of each semester. (20 pts.) =35 pts. Total

Assignment #16 Comparing The Value of Open ended Inquiry/ Inductive Lab experiences to Closed Ended (Deductive) (10 pts.)

Spirit of the Assignment: Teams will be presented with a problem called the "Paper Towel Experiment" and using the Scientific Method (or 5 E Inquiry Model) design an experiment using "tools" on hand. Teams share the design, data and findings of the experiment and (value /challenges) of having students use this model. Ideas for implementing and integrating inductive/inquiry learning in the Science classroom are shared.

Course Schedule/Calendar and Outline (subject to change and adaptation as needed):

Fall Semester EDSS 545 A:

Assignment/Reading due by September 6th (Class #1A) or September 13th (Class #1B). Note: This is an introduction to a “Flipped Classroom Online Model” where readings, videos and responses are done prior to class in an effort to fast track how to apply or problem solve ideas in class meetings.

Class #1 A (Online/Independent Reading/Responses) Complete and send #1 (Chapter Responses) and #2 (Scope and Sequence) below to EDMODO by September 6th (Thursday).

- 1) **Read Ch. 1 and 2 (Assignment #2) from “Science Instruction...” Enter electronically in EDMODO (Under Small Groups Chapter 1 or Chapter 2). Directions on how to enroll in EDMODO will be sent via email. Don’t forget to comment on two other students responses as well as mine (3 in all).**
 - **In Chapter 1 “Getting into Science Teaching” address these prompts: After reading the introductory vignette and her mentor teachers responses as well as the supporting materials explain what areas of instruction Mrs. Locke did well and areas she needs to improve? Look at Figure 1.1: What areas of science education from the chart do you think are particularly important. Comment on these. How do these reflect the way you were taught science in K-Higher Ed? Complete the Science Teacher Inventory. How did you do? Explain? What are questions you have from this reading?**
 - **In Chapter 2 “Purpose of Science Teaching” address these prompts: After reading the vignette and responses: Why is it so important to put an emphasis on science literacy especially in general science classes? What are some of the factors that contribute to higher performing countries doing better in science than the USA based on PISA and TIMSS studies? How can you as an individual teacher offset this? How do the NGSS standards address some of the limitations that resulted in the USA performing below the top performing countries? What other questions do you have from this reading? (9 pts. Each= 18 pts.)**

- 2) **Curriculum Mapping with the assistance of MT: Create a scope and sequence of all the units you will teach in your content course (see template of the three tasks and example). Send this to EDMODO. This will assist you in starting to understand how the NGSS standards connect to your assigned course over a semester as well as provide a lesson idea link to your Ca-TPA exam. Assignment 2B= (10 pts.)**

Class #1 B (Online/Independent Reading/Responses) Complete and send your responses related to the NGSS standards Assignments 3A and 3B below to EDMODO by September 13th (Thursday).

3) **Assignment # 3 A and B – Understanding and applying the Next Generation Science Standards (NGSS) (20 pts) Complete 3A and 3B and send to EDMODO. 3C will be done in class): See directions under “Descriptions of all Assignments” for 3A, 3B and 3C.**

Class #2 September 20th (Thursday 5:00-9:00 UH 439)

- Class introductions
- *Read syllabus prior to class with special attention to the following: 1) copy fall semester grade sheet; 2) assignments required; 3) description of each assignment. 4) Assigning directorships; 5) Course outline/objectives.
BRING ANY QUESTIONS TO CLASS
- * **Discussion of Reading responses and questions from Text Ch. 1-2 (put on EDMODO prior to class)**
- **Discussion of Readings/Videos from NGSS standards and overview of Assignment #3 C (to be completed in Class #4-#5.**
- *Prior to class be prepared to respond to these questions: **How would you define Science? How should it be taught in high school? What do you think is important for you to learn this year?**
- **Discussion of Graphic Organizer overview for EDSS 545 (in class)**
- **Introduction to inquiry based science/5E Inquiry Model** through a discrepant event (DE) with in class presentation by Keating of “Bouncing Balls” (Discussion of the basic pedagogical elements of an effective DE/Inquiry)/Class Schedule for DE (2 students per presentation/2 presentations per class)
- Discussion of **CT observation assignment #9** due in Class #4-#5 (What was effective? What was ineffective? Recommendations for change?)

Review Assignments for Next time: (to be discussed in class)

- 1) Sign up for dates for DE (2 presentations) Assignment # 6;
- 2) NGSS standards jigsaw by subject areas assignment #3a-c;
- 3) View these video's prior to class to see a teacher applying the NGSS Standards=
<https://www.teachingchannel.org/videos/cross-discipline-lesson-achieve> (questions/comments/discussion in class)
and an overview of how to read the language and codes used in the NGSS standards=
<https://youtu.be/Q6eoRnrwL-A>
- 4) Address these prompts for Ch. 4 Assessing Science Teaching and send to EDMODO prior to Class #3; As described in the vignette why do you think many students do not perform well on summative assessments? What are some personal experiences that you have had or observed related to pre, formative and summative assessments? Give some examples of types of authentic/alternative assessments you think you will use in your own teaching? Questions on the chapter?

Class #3 September 27th : (Thursday) 5:00-9:00 (UH 439)

- ***Discrepant event presentations (two)* #6 a-b**
- ***Discussion of Reading from Chapter 4 Assignment #2**
- **Begin Jigsaw of NGSS Frameworks and Standards Assignment #3C**
- **Discussion of Teacher Video on applying NGSS Standards and overview/review of NGSS Standards**
- **“Overview of NGSS Standards” (Keating Mini-Lecture #1 PPT**

Review Assignments for Next time:

- 1) Complete Jigsaw of NGSS Frameworks and Standards Assignment #3C
- 2) Discrepant Event (2 presentations)
- 3) Formal Observation of MT (#9) (What was effective? What was ineffective? Recommendations for change?)
Send to EDMODO
- 4) Selection of a major problem or issue in Clinical Practice for Case Study 1 (this is preliminary report #1) for Assignment #15 (also see Addendum C in Syllabus for Case Study Model)

Class #4-#5 September 29 (Saturday 8:00-300 in UH 439)

- ***NGSS Frameworks and Standards Jigsaw Assignment* #3 C**
- **Discussion of Findings from MT Observation #9** (What was effective? What was ineffective? Recommendations for change?)
- **Overview of “TIMSS study and implications for Science Ed in USA” (Keating Mini-Lecture #2 PPT)**
- **“Inquiry Based Compassionate Discipline Model” (Keating Mini-Lecture #3 PPT)**
- ***Discrepant Events (two) #6 a-b**
- ***The use of Inquiry Based Level 2/Open ended/Inductive vs. Closed ended/deductive science lab experiments “Paper Towel Experiment” (in class) Assignment #16**
- **Discussion of Case Study 1 Preliminary report #1 Selection of Issue or Problem to study in CP 1**

Review Assignments for Next time:

- 1) Address these prompts for Chapter 8 Inquiry: How would you define inquiry for your students? Describe specific examples of each level of the Three Levels of inquiry you have seen or for which you have been a part of? Were the three critical elements of inquiry included (Phenomena, practice and outcomes)? Was it effective? How would you improve it? What are three examples of inquiry (pp. 145-154) you would like to include? What do you see as the three most critical challenges to doing inquiry? How will you overcome these? Other questions from the chapter?
- 2) Case Study 1 (preliminary report #2= baseline data and proposed action plans) Send to EDMODO
- 3) Discrepant Event (1-2 presentations)

Class #6 October 11th (Thursday 5:00-7:15 UH 439) Video Conference

- **Guest Speaker Former Student April Thom on NGSS standards applied**
- * **Discrepant Events (two presentations) #6 a-b**
- **Discussion of /Reading Prompts in Text (Chap 8 Inquiry) due in EDMODO)***
- **Case Study 1 (preliminary report #2= baseline data and proposed action plans)**

Review Assignments for Next time:

- 1) Discrepant Events (1-2 presentations)
- 2) Identify action plans/ preliminary data for identified issue(s) for Case Study 1 Issues in Student Teaching Preliminary Report #3

- 3) Address these prompts for Chapter 5 "Teaching Science": Using the reflection sheet on p 86 to guide you evaluate the lesson described in the vignette and describe how you might adapt it? Which teacher attributes/dispositions do you need to work on and improve as described in pp. 88-91? Use the evaluation sheet found on p. 96 to assist in evaluating one of your science lessons in terms of your professional characteristics (attributes, teaching skills, instructional strategies and learning techniques (can be self, peer or CT or any combination). Results? Questions from the chapter?

Class #7 Independent Study Assignment #12 (see description of assignments for details): No formal meeting

Sometime between October 11th and November 29th Complete this and send to EDMODO for presentation in Class # 9 (November 29th)

Assignment #12: Attend a science related informal or formal event or presentation equivalent in time and effort for at least one class session (3 hrs). This could be a field trip, museum, lecture, conference or some other equivalent experience that will assist you either directly or indirectly in becoming a science teacher. Your choice!! To complete this requirement: 1) complete a one-page summary with explanation of its potential applications to teaching. Specifically this should include a summary of what you learned and implications for your own teaching; 2) send to EDMODO; 3) do a 1-2 minute presentation to the class.

Class #8 October 25th (Thursday 5:00-7:15) in UH 439) via Video Conference

- **Guest Speaker (former student)**
- **Discussion of response to prompts from Ch. 5**
- **Discuss your implemented action plan and any preliminary data from Case Study Model for Assignment #15 (also see Addendum C in Syllabus for Case Study Model Final Report). This is preliminary report #3**

Review Assignments for Next time: Go over assignments for next classes:

1)*Prepare a synthesis written report/outline on your proposed Personal Plan for Science Safety (Assignment #8 based on all of the following used for input:

A) Reading information from Chapter 14 (text) (As a prompt: Discuss the top five practices you would utilize and send to EDMODO)

B) Interviewing your CT for their best practices in science safety (as well as from your own experiences)

C) Ideas from "CA Science Safety Manual" (see syllabus for link under required texts)

D) Ideas from Flinn Scientific Safety Teacher Resources (Steps to take... =<http://www.flinnsci.com/teacher-resources/safety/general-laboratory-safety.aspx>) +(Video Link resource for Students first day=

<https://youtu.be/5g0hNM91iyg>

2)*Report on Independent Study project (Assignment #12). Send to EDMODO.

3)* Select a 15 minute mini conference (2-3 candidates) to peer review and answer questions re Ca-TPA prior to submission before November 11th.

Class #9 November 29th (Thursday 5:00-7:15 in UH 439) via Video Conference)

- *Presentation/Discussion of Personal Plan for Science Safety assignment #8: Flinn safety manual + Ca Safety+MT interview+ Ch. 14 Science Safety.
- *Report on Independent Study project (Assignment #12) Send to EDMODO

Review Assignments for Next time: Go over assignments for next class

1) Final Case Study Written Reports #15 (Send to EDMODO)

Class # 10 December 17th (Monday 5:00-8:00 in UH 439)

- **Issues in Clinical Practice 1: * Final Case study report outcomes/discussion of #15 (Addendum C model) Send written report prior to presentation to EDMODO**
- **Graphic Organizer of the course so far EDSS 545 A**
- **Instructor Evaluations**

Addendum A Grade Sheet for Fall Semester (please make copy for grade folder) EDSS 545 A

Name:

Assignment Number/Name

#1 Attendance (5 pts. each class) (50 pts.)

#2 A Sci. Methods text reading responses (6 pts for posting + 3 pts for 3 responses to others=9 pts).

Ch1 _____ Ch2 _____ Ch4 _____ Ch5 _____ Ch8 _____ Ch14 _____ Ch 6 _____ (extra credit) (54 pts.)

#2 B Clinical Practice 1 Scope and Sequence Assignment (10 pts.)

#3 NGSS Frameworks/Standards= (30 pts.)

3a= Individual readings/responses= 10 pts.

3b= Individual lesson plan = 10 pts.

3c= Subject matter group presentation= 10 pts.

#6 Inquiry Based Lesson (Discrepant Event) (30 pts.)

6a= DE presentation and handout = 25 pts.

6b= Reflections on pre-lesson = 5 pts.

#8 Personal Plan for Science Safety (Readings, interviews, Videos+ Final Plan) (10 pts.)

#9 Observation report on observation of a Science Lesson (15 pts.)

#12 Independent Study at a formal or informal event (report) (10pts.)

#15 Issues in Clinical Practice 1 (Case study/Action Research) (Prelim reports (5 pts) +Final (20 pts)=35 pts.)

Preliminary Reports (Problem, Baseline data, Action Plans, Data) + Final Report (see Addendum B)

#16 Open-ended (Inductive) vs. Closed-ended (Deductive) Experiments (10 pts.)

Total possible points = 254 pts.

Points earned _____

Extra Credit _____

Average/Grade _____

Case Study (Action Research) Considerations for Assignment #15 Issues in Student Teaching

A case study is a formal but dynamic strategy of teacher led research (action research) that uses a collaborative process to problem solve some issue in education. Some generalized steps should include at a minimum at least the following preliminary processes leading to a final report:

- 1) **Identify a problem** (Preliminary Report #1) what factors are inhibiting your ability to teach or the students' ability to learn. *It may take many forms such as: infrastructure: I room is too small to have laboratory type exercises; management: one of my students will not do any homework; teaching materials: I have no lab manuals and little materials; teaching strategies: I do not know how to deal academically with such a wide range of abilities in my class. ETC.*
- 2) **Brainstorm possible solutions** i.e. Action Plans (treatment) and Data Collecting methods (Preliminary Report #2) based on general knowledge from classes, readings, master teachers and prior experiences. After you have discussed the issue with your colleagues and instructor get feedback and suggestions from them. *Ex. From infrastructure problem: swap rooms with another science teacher one day a week when they are not using the lab. This should be coordinated with the principal and based on state mandated requirements for safety in science laboratories. In terms of data collecting I would: observe student behavior in lab classroom compared to the regular; use a focus group of students discuss their perspective of this new space; compare results of lab/test scores pre and post this treatment.*
- 3) **Propose an action plan with specific actions and a timeline (includes collecting baseline data)**
Preliminary report #2
Observe behavior, collect test scores etc. prior to changing rooms. For three weeks with plenty of warning to the students change rooms to use the lab. Identify additional problems this may create and propose changes. Use the baseline data to compare to data after the treatment. Note limiting and delimiting factors.
- 4) **Ongoing collection of data from observations (interviews, evaluations etc.) Preliminary Report #3/#4. You may decide to drop or add specific action plans based on preliminary findings.**
Students took an extra five minutes to get to this lab so I said if they were on time this would result in a bonus of 5 pts on their lab report for at least the first three weeks. Also noted: there were less behavioral issues and more time on task. Lab scores increased 10% all compared to baseline data. Will see if it is possible to use twice a week.
- 5) **Final Report should include discussion of Steps: #1-4 above in addition to the summary of the outcomes and implications** from the findings of the Case Study. What were the successes and the challenges to the plan? What would you do in the future (steps) to improve on it? What have you learned from the study?

I would request an adequate lab space from the principal or whoever schedules a year prior. I would make a recommendation on which room might be a good fit for my curriculum and point out the state requirement for adequate space and safety for laboratory based science classes. I will make these recommendations supported by my final report, which included less classroom management issues, and higher achievement compared to baseline data.

Addendum C Scope and Sequence Template and Example

CURRICULUM MAPPING – SCOPE AND SEQUENCE ASSIGNMENT FOR HSSci METHODS

Directions:

1. Working with your CT, learn about the semester plan for your co-teaching class assignment. Use the template below to record the units and number of weeks per unit. You may not need all 8 blocks, depending on the course plan or you may need more. Adjust accordingly. (Part A)
2. Select one of the units for the semester, your choice, and complete Part B.
3. For the selected unit list the lesson sequence (one for each day of the unit, title-purpose)

(A) DISTRICT Curriculum Map – Scope and Sequence Template

Purpose of Planning	<u>Unit One/weeks</u>	<u>Unit Two/weeks</u>	<u>Unit Three/weeks</u>	<u>Unit Four/weeks</u>
Unit Topic and Overview				
Prerequisite Student Knowledge What should students have mastered prior to this unit?	Students should have a general understanding of ...			
Purpose of Planning	<u>Unit Five/weeks</u>	<u>Unit Six/weeks</u>	<u>Unit Seven/weeks</u>	<u>Unit Eight/weeks</u>
Unit Topic and Overview				
Prerequisite Student Knowledge What should students have mastered prior to this unit?	Students should have a general understanding of ...			

(B) SCHOOL SITE / DEPARTMENT Unit Planning (include Unit Number, Name, number of days – e.g. Unit 2, Physics “Laws of Motion”, 5 days)

STANDARDS FOR THE UNIT

CCSS:

NGSS Standards

CA ELD Standards:

Enduring Understandings for the Unit:

Essential Questions for the Unit:

Summative Assessment for the Unit:

(C) INDIVIDUAL TEACHER – LESSON SEQUENCE (List of title/purpose of each lesson from selected unit)

Day 1-Day 2.....etc.
